🪪 Profile

I'm a person who enjoys code. I began as a hobby programmer in high school, which led me to pursue a formal computer science education. I enjoy exploring various aspects of technology to broaden my skill set. In my free time, I actively participate in coding challenges and contribute to open-source projects to enhance my coding proficiency.

📂 Projects

FrontDesk
This project is a official website **Hotel Booking Management System (RCH)** built with React for the frontend and Firebase (Firestore & Storage) for backend services. It allows hotel staff to manage room bookings, track availability, upload & view booking images, and generate booking reports in Excel format. Tools: React, Styled Components Firebase Firestore, Firebase Storage

Colorpicker-gradientgntr : ⊡
Created a versatile web page using HTML, CSS, and Bootstrap, featuring both a color code generator and picker for frontend design.Implement JavaScript to enable seamless functionality for users to generate and pick colors for UI/UX design.

FinSnap
FinSnap is a **Billing and Invoice Management System** designed for small and medium-sized businesses. It provides a professional, user-friendly interface for managing invoices, tracking payments, and visualizing financial data in real time. Built with **React** and **Firebase**,

ClipBird ⊡
Collaborated on Clipbird documentation website development, contributing to design and content.
Purpose of Clipbird: Effortlessly sync clipboard data across your local network, ensuring security, connectivity, and easy access to clipboard history.
Utilized HTML, CSS, Bootstrap, and ReactJS to create a user-friendly website.

MR_newspage ⊡
Developed a React Native application that dynamically showcases news headlines across various categories, leveraging the News API for fetching real-time articles.
